Surgical Hand Holding Table Components

A) Surgical Hand Holding Table
B) Retractor Posts – 2 Tall/ 2 Short
C) 4 Hook Retractors – 2 Large/ 2 Small
D) 24” Silicone Tubing
INTENDED USE

The Surgical Hand Holding Table is designed to allow the surgeon to tether the hand and fingers to a stable, adjustable platform during all types of hand and wrist surgeries/procedures.

The platform then provides tie points to apply hook retractors from almost any direction.

The weight and stability of the Surgical Hand Holding Table keep the hand where the light is focused. It also allows tilting of the hand to change the surgeon’s point of view.

The Surgical Hand Holding Table is a medical device that should only be used by trained professionals.

USING THE SURGICAL HAND HOLDING TABLE

The Surgical Hand Holding Table and accessories, except for the hook retractors, are not sterile when shipped from the factory. Therefore, all the components except the hook retractors must be AUTOCLAVED before use. Make sure to detach the tabletop from the table base prior to autoclaving.

For more information on sterilization see the Sterilization and Maintenance section on page 6.

After the Surgical Hand Holding Table and accessories are autoclaved, reattach the tabletop to the table base. To do this set the table base on a stable platform and screw the tabletop onto the table base with a few clockwise turns.

Stop tightening when the tabletop can easily be tilted and still maintain its position. Make sure not to over tighten. Note: Be careful to not cross-thread the two pieces as this may damage the equipment.
The next step is to stabilize the patient’s hand to the Surgical Hand Holding Table. To do this, tie the hand to the tabletop using sterile silicone tubing (See Picture Below). The Surgical Hand Holding Table may be used for access to wounds anywhere from the hand to the elbow simply by applying it in the area of surgical interest.

Now that the hand is attached to the Surgical Hand Holding Table the tabletop can easily be tilted to change the surgeon’s point of view. If an incision is made in the patient’s hand/forearm, hook retractors can easily be applied to allow access to the depths of the wound. To do this, apply the hook retractors to the skin edges and attach the silicone tubing ends to any of the notches on the edge of the tabletop. Note: Hook retractors can be applied from almost any direction (See Picture Below).
The Surgical Hand Holding Table comes with retractor posts that elevate the angle of pull of the hook retractors off the tabletop. To use the retractor posts, insert the beveled ends of the posts in any of the holes on the tabletop.

Now apply hook retractors to the skin edges and pull the hook retractor tubing over the posts. Finish by attaching the silicone tubing ends to any of the notches on the edge of the tabletop (See Picture Below).

Note: The retractor posts have channeled tops to keep the silicone tubing from slipping off the posts. The slots in the retractor posts may be used to provide different angles of pull as well.

Please note: Since this Surgical Hand Table is not radiolucent, you will need to move it aside when the procedure is completed before doing any X-Rays of the hand. According to surgeons already using the product, this is not a major obstacle.
STERILIZATION AND MAINTENANCE

The Surgical Hand Holding Table and all accessories, except the hook retractors, will not be sterile when shipped from the factory. **The Surgical Hand Holding Table and all components, except the hook retractors, must be autoclaved prior to the first use.**

Before each use, autoclave The Surgical Hand Holding Table at 270 to 274 degrees Fahrenheit for 5 to 10 minutes. Autoclaving is the only technique recommended to sterilize the Surgical Hand Holding Table and components. Do not use any other sterilization techniques. IMPORTANT: **The tabletop must be unscrewed from the table base when it is autoclaved to prevent the ball joint from ceasing.** Cool the equipment to room temperature before using.

The Surgical Hand Holding Table must be autoclaved prior to each use. The hook retractors supplied with the Surgical Hand Holding Table are for single use only.

Only use mild detergents or a standard disinfectant to clean the Surgical Hand Holding Table. Note: This will only clean the equipment and will not be suitable for sterilizing it.

Do not use strong detergents or chemicals to clean the Surgical Hand Holding Table.

LIMITED WARRANTY/LIABILITY INFORMATION

The manufacturer covers the Surgical Hand Holding Table with a manufacturer warranty for one year from the date of purchase. The warranty only covers problems with the Surgical Hand Holding Table that can be attributed to manufacturer defects. Any damages or problems that are caused by inappropriate use or mistreatment of the Surgical Hand Holding Table are not covered under the warranty.

The manufacturer and distributor will not, under any circumstance, be liable for any sequential or incidental damages. Buyer assumes all liabilities pertaining to the use of this product. Only trained medical professionals should use this product.

Call SW Med-Source immediately to exercise the warranty if problems occur. If the problems are covered under the warranty, manufacturer will repair or replace the equipment free of charge. NOTE: Shipping charges are not covered under warranty.

Complaints: If a complaint or incident occurs from the use of the Surgical Hand Holding Table, inform the manufacturer immediately. All complaints must be submitted in writing. All complaints must include your name, facility name, phone number, address, a short description of the problem and when/how the problem occurred.
REPLACEMENT PARTS LIST

1. Tabletop (450HTT)
2. Base Plate (450HTP)
3. Ball Joint (450HTJ)
4. Collar (450HTC)
5. Stem (450HTD)
6. Retractor Post-Tall (450HTO-T)
7. Retractor Post-Short (450HTO-S)
8. Screws (450HTS)
9. Silicone Tubing, surgical grade, 1/8” inner diameter. (Our stock#450HTZ),
10) Hook Retractors (#450HRT)

To place orders with SW Med-Source, please call toll free: 1 888 424-1740 between the hours of 8 am and 6 pm CST. See Traction Device website page at www.swmedsource.com for current pricing.
